ABOUT US

Zandscarpets started as a small shop in 2008 and quickly expanded to offer customers easy access to their multiple stores in the UAE, providing them with a wide range of floorings, including our in-house brand for the entire market retail of the United Arab Emirates. We import high-quality products from China which follow strict international quality protocols. We have emerged as a homeowner-favourite firm since we entered the flooring market in 2010. In addition to the wholesale and retail vertical, we have even started exporting our products to countries like Oman, Saudi Arabia, Africa, and the rest of the GCC. Thus, making us known all over the world!

We offer bespoke modern flooring designs that you prefer because of our modern quarries, advanced technology, and dependable craftsmen. We also offer a comprehensive range of flooring solutions with installation services in a variety of forms, sizes, finishes, and edges to meet your design and aesthetic requirements. Every product we sell is of high quality, long-lasting, and resistant to weather and misuse. You can be confident that the natural stone kind you select will age gracefully over time without requiring you to invest much time, effort, or money in its upkeep.

DECK FLOORING

It is a type of wood flooring that is designed to cover outdoor surfaces. WPC decking, which is commonly known as composite decking, is a special kind of decking material that incorporates both plastic and wood. WPC, which stands for Wood Plastic Composite, is a composite comprised of additives and 45% wood fibers, and 55% HDPE. Basically, it is like the luxury vinyl of the flooring market. It looks hassle-free that can save you from maintenance costs, termites, and many more. This type of flooring is really easy to maintain, you can just wash it off with soap and water when its gets soiled. It can bring an elegant look to your balcony. Contact Deck Flooring in UAE to get your walls a makeover. Furthermore, it is effortless to install and some of the wood species are normally resistant to the actions of external agents. Some of the durable wood species that don't require conservation treatments are teak, iroko, and ipe.

ACACIA DECK TILES

On the patio, balcony, near to a pool or spa, or in the kitchen and bathroom rooms, it quickly creates a solid hardwood floor in a few hours. No hassles associated with traditional deck construction. The deck tiles can easily be cheaply reused on different floors by simply snapping and unsnapping them on one floor. Your floor can be constructed in a matter of hours rather than days, so you can start using it right away. There is no need for screws, glue, or hammers. Excellent and high-quality furniture that is resistant to termites, rot, mold, and mildew is made from 100% Acacia Hardwood, which is native to Australia and Asia.

WPC DECK TILES

WPC deck tiles are largely constructed of wood, but they also have a thick coating of plastic that you can lock in place and that also allows water to drain correctly. The WPC deck tiles snap into place, making them incredibly robust, able to withstand our harsh winters, and fashionable. WPC deck tiles are resistant to these effects as long as they are installed over an even-level, self-draining surface. Stone frequently deteriorates over time as a result of water seeping into cracks and eroding the stone. Z&S Carpets offers a variety of wood types, but you can also pick the color of your composite.

WPC CO-EXTRUSION DECK TILES

Co-extruded decking, to put it simply, is a very high-tech decking choice with even better performance than regular composite decking. A co-extruded deck has a scratch resistance that is roughly three to four times greater than regular decking. Additionally, this variant has 0% water absorption as opposed to the typical 2%. Additionally, you receive composite decking with a lower expansion rate than usual. A wood brushing finish that appears wonderfully natural and beautiful tops off all of these advantages. Overall, you have a finished product that will not fade or be damaged over the course of several years.

COEXTRUSION-DK-
ABALONE

COEXTRUSION-DK-BROWN

COEXTRUSION-TEAK

WPC CO-EXTRUSION SOLID DECK FLOORING

Co extrusion solid decking is a clever method to obtain a gorgeous, durable board. There are no environmentally hazardous adhesives or chemicals because the shield and core are extruded simultaneously. The second generation co-extrusion decking is becoming more and more well-liked in the yard due to its natural surface and consistent quality. Co-extrusion decking is free of stains and moisture thanks to its high performance and moisture-resistant polymer cap. You will discover it is a pleasure to build this decking if you have a complete set of accessories. It combines the benefits of both wood and plastic, but it also lessens the need for needless, repetitive maintenance and the time and money required for repairs.

WPC SOLID DECK FLOORING

The demand for WPC solid decking has experienced rapid expansion, and it is anticipated that this trend will continue. This is a solid alternative to conventional decking and provides a lengthy range of benefits to end users and distributors, making the investment worthwhile. The decking material WPC solid decking, often known as composite decking, is a special blend of plastic and wood. WPC, which stands for Wood Plastic Composite, is a composite comprised of additives and 45% wood fibers and 55% HDPE. WPC decking is so long-lasting that STORM offers a 10-year guarantee on our Triton WPC range against splitting, rotting, cracking, and decay. It also resists fading, staining, scratching, and mold

BAMBOO SOLID DECK FLOORING

If you decide to go with solid bamboo flooring rather than engineered planks, you will then have three options to think about. You can choose from solid strips of bamboo with a vertical grain, a flat grain, or strands of bamboo. Regardless of which one you install, they are all equally resilient and offer a high-quality flooring alternative, so you can pick with the style that best suits your preferences and design goals while still knowing that you will have a durable, attractive floor. Thin bamboo strips that are placed on edge and then joined with adhesive to create vertical-grain bamboo have a butcher-block-like appearance.

Bamboo Solid Decking Maple

DECK FLOORING ACCESSORIES

A few accessories are necessary for proper wood floor installation in order to guarantee a flawless surface and longevity. To fill in the gaps left by the floor's expansion around the room, a hardwood quadrant is utilized at the flooring's edges. A structural subfloor is covered with a thin layer of plywood called underlay, which serves as a sound and moisture barrier. Edge moulding aids in the floors' natural expansion and contraction when they touch immovable things like a door casing. When trying to fill the space between actual wood flooring and items like doors, walls, and windows, edge moulding is one of the greatest options. One of the most important wood flooring accents, beadings help to close the space between the floor and the wall to keep the latter looking tidy and neat. For any floor design, Mikasa offers a large selection of beadings in a variety of colors and sizes. They are made of solid wood and can be used when removing the existing skirting is challenging. They are suitable for floors of various thicknesses.

SPC FLOORING

SPC, or Stone Plastic(or Polymer) Composite flooring, is the new buzz in the flooring industry! SPC is a premium categorization of LVT but is purely waterproof and significantly more sound than old-school LVT.

SPC flooring is said to be the "next generation" of vinyl flooring. Furthermore, unlike wood and laminate flooring, they are completely water resistant, making them significantly more versatile and suited for all types of spaces, including wet rooms such as bathrooms and kitchens.

The SPC core, which is typically 3.2 to 7 millimeters thick, is created by mixing limestone powder, polyvinyl chloride, and stabilizers. SPC floors are extremely durable because of the limestone core, with typical warranty durations of 25 years or more. If you are out there looking for professional SPC flooring services

CAMEL SPC FLOORING

Camel Spc Flooring is a Stone Plastic Composite (SPC) flooring that has a core typically constructed of polyvinyl chloride, plasticizers, and 60% calcium carbonate (limestone). Similar to WPC, this floor has a stiff core, however it has a thinner core. It is still inherently water-resistant, though, so a second or third waterproofing layer is not necessary.

HIGHER SPC FLOORING

Higher spc flooring is also used in the home, SPC vinyl flooring is one of the best options for areas with a lot of foot traffic, such as hotels or workplaces. This name, which is an abbreviation for Solid Polymer Composite, alludes to the material's stiff composition, which is more so than that of conventional vinyl due to the core's construction of stabilizers and limestone. The "next generation" of vinyl flooring is SPC. They are also 100% water resistant, making them much more versatile and appropriate for all types of spaces, including wet rooms in the home like bathrooms and kitchens, in contrast to wood and laminate flooring. Vinyl floors are made of many layers, with a high-density wood fiberboard serving as the central core and an overlay providing resistance to wear and abrasion.

GYM (EPDM) & SPORTS FLOORING

Whether you're setting up a commercial gym, sports facility, or home gym, choosing the right flooring is essential. From shock-absorbing rubber to durable PVC, there are numerous options available to suit your specific needs. If you're located in Dubai, we've got you covered with a list of top gym flooring suppliers in Dubai to help you make an informed decision.

A home gym/sports flooring might be just as significant as exercise equipment. Investing in the quality gym and sports flooring not only enhances the look of your space but also improves safety and performance. From customized designs to eco-friendly options, the right flooring can provide a multitude of benefits.

Choose one of these flooring alternatives to lay a firm foundation for your workouts. The flooring type can also impact noise, which is essential for second-floor home gyms or individuals living in upper-level apartments. Moreover, appropriate cushioning protects knees and other joints while also reducing injury from dropped weights. For high-quality options, consider reaching out to Gym Flooring Suppliers in UAE. So, let's explore the world of the gym and sports flooring together!

RUBBER FLOORING

Rubber flooring is a type of flooring solution that is meant to protect the surface. It is made out of natural rubber trees or from synthetic recycled materials like sports equipment, tires, and even shoes. This flooring material only needs low maintenance due to its high versatility and high durability. It can also be made by extracting natural rubber from the Amazonian rubber tree, which is also known as *Hevea brasiliensis*.

It is an ideal option for accommodating heavy foot traffic just like in hospitals, laundry rooms, utility areas, and gyms, and is one of the flooring materials that are easy to install. It is a great surface option for upgrading the beauty of the space. It has various advantages that attract people to choose this type of flooring. This material is also finding its way to residential indoor and outdoor applications with its availability in a wide selection of textures, patterns, and colors. It can be easily maintained and synthetic rubber flooring is commonly more resistant to stains than natural rubber. You can contact our rubber flooring Dubai for installing rubber flooring with perfection.

CHECKER RUBBER

Checker Rubber is a fantastic all-around, durable, and affordable rubber flooring. The Checker Rubber features a great anti-slip design that not only insulates against cold concrete floors but also offers amazing anti-fatigue qualities and comfort, making it perfect for industrial, commercial, or residential use areas. Excellent flooring roll that is durable, affordable, and all-around good. Premium anti-slip checker plate design with increased UV stability and tear resistance. For chilly concrete floors in a household, commercial, or industrial application, ideal insulation. Specialized anti-fatigue features give extra comfort for larger personnel. It is Grade A, 100% recycled, nontoxic, easy to fit, and suitable for a variety of uses. It is also non toxic and nontoxic.

Checker Rubber Flooring comes in 3mm and 5mm Thickness.

DIAMOND RUBBER

Nothing conveys the elegance of industrial flooring like the traditional Diamond-Plate design. This is a premium rubber flooring product that is comprised entirely of SBR components. Diamond Plate rubber matting has a specific, high-traction rubber compound that offers improved slip resistance. It is excellent for preserving floor surfaces and guaranteeing worker safety in a range of settings and is ideal for damp areas and entryways in any industrial facility. Anti-Slip Defense, Basement Flooring, Boat Deck Mats, Bus Flooring, Catered Events, Commercial Vehicles, Commercial Kitchen Floor Mats, Construction Corridors, Dog Mats for Kennels, Entryways, Garage Flooring Mats, Golf Courses, Heavy Duty Mats, Hotels, Indoor/Outdoor Aisle Ways, Industrial Shelves, Industrial Floors, Large Floor Mats, Mats for Treadmills, Movie Sets, and Utility Shelves. **Checker Rubber Flooring comes in 3mm and 5mm Thickness.**

DOT RUBBER

This studded rubber mat has a circular surface pattern and a flat backside that provides a safe and comfortable gripping surface. In contrast to certain other forms of non-slip rubber matting, this mat's circular non-directional studded pattern provides a non-slip surface that is easy to clean and will not retain dirt. Strong smooth studded matting makes an excellent walkway for high foot traffic since it is incredibly resilient. Durability, noise reduction, insulation, non-slip, and scratch and damage protection are among the qualities. Made from natural rubber, it offers good water resistance and abrasion/tear resistant properties. Applications in fitness center floors, laboratories, bars, elevators, walkways, corridors, high traffic areas, industrial & automation pathways. **Dot Rubber Flooring comes in 3mm and 5mm Thickness.**

LINE RUBBER

Despite line rubber flooring's apparent toughness, these surfaces can be very prone to deterioration. Repairing materials like wood and tile can be very expensive. The flooring may need to be completely redone in several situations. A broken floor can present a safety risk in addition to being unsightly visually. When it comes to safeguarding your current surfaces, lined rubber floors—whether they be installed as rubberized floor tiles or rolled rubber mats—are the ideal choice. Rubber is perfect for applications involving flooring because of its physical durability. While natural rubber flooring is certainly a solid choice, it is especially true if the rubber floors are constructed of recycled rubber.

COIN RUBBER

Z&S Carpets has a wide selection of Coin Rubber Mat Rolls available. Due to its extensive use, the Coin Rubber Mat Rolls that we provide are highly sought after by clients. These goods are renowned for their exact use and are appropriate for many applications. Coin Rubber is Long-Lasting, Flexible in Design, and Durable.

HORSE MAT

Recycled crumb rubber of the highest quality is used to make horse stall mats. Although it may seem like the ideal requirement for gym flooring, keep in mind that these mats are made for horses. The main objective of the product is to give thoroughbreds and other large animals a comfortable floor. Horse stall mats for use in gyms are normally 4' by 6' mats with a thickness of either 12" or 3". They are a well-liked option for home gym mats due to their low cost and accessibility. These mats are a cheap way to get your feet wet if you want to test the waters before committing to your home gym.

RUBBER TILE

Rubber flooring tiles are wonderful for a wide range of uses and appropriate for practically any workout environment because they are durable, inexpensive, and simple to install. They fit any space and are very simple to assemble by clicking in like puzzle pieces. They can also be added at any time. It guarantees stability, offers a good grip, withstands heavy loads and high impact activity, feels soft and comfortable underfoot, and provides excellent cushioning and shock absorption. Rubber is also very strong and resilient. Rubber floor tiles are available in a wide range of textures and colors, allowing you to select the ideal tones and shades to complement your interior design, add some flair to the room with unique colors and patterns, or keep it straightforward with solid.

COIN TILE

Z&S Carpets' Coin Tile was created for use in residential garages and is strong enough to support big loads like rolling lifts, hefty tool chests, and SUVs. In addition to our textured surface, the Coin Top surface pattern is intended to give an extra layer of protection when walking on them. The high-impact polymer material used to make the tiles is lightweight and robust enough to handle large rollover loads. High-impact polymers are also incredibly stain resistant. Because materials do not adhere to them well, the tiles are quite stain-resistant.

Grey

Black

SOUND PROOF MAT

Floor mats that are soundproof reduce or absorb noise. Typically, a noise reduction mat inserts a soft layer between the structure of the building and the source of the noise, reducing transmission. Soundproof floor mats are more effective against impact noises than airborne noises due to placement and composition. Let us briefly go over the differences to see why this is the case. There are several reasons why you might want to make your floor quieter, including loud footfall or creaking floors. Soundproof floor mats are one of the simplest and most affordable solutions I have come across. They are customizable to your demands and spare you from having to perform significant DIY.

BUBBLE MAT

Raised bubble surface built to be safe and comfortable while keeping fatigue in mind. Beveled edges are built into the bubble mat for safety and handcart access. Bubble mat adds comfort and allows air to move underneath shoes. It is perfect for industrial applications, assembly lines, food processing, safety walkways, and workstations. Raised bubble surface built to be safe and comfortable while keeping fatigue in mind. Beveled edges are built into the bubble mat for safety and handcart access. Also adds comfort and allows air to move underneath shoes. It is perfect for industrial applications, assembly lines, food processing, safety walkways, and workstations

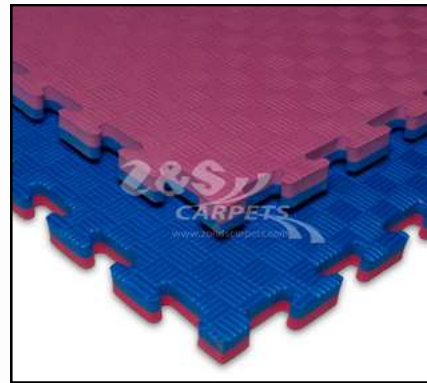

EVA MAT

Eva mat is utilized for a variety of flooring materials, as well as Cosplay outfits, sporting goods, crafts, and set design. It is an ethylene and vinyl acetate polymer, which is soft but strong. EVA mat is simple to work with and is available in a range of hues and densities. EVA mat flooring is ideal for fitness rooms, gyms, weight rooms, trade exhibitions, martial arts studios, and more because to its versatility. The EVA mat's many advantages include noise absorption, which is a bonus for a gym or office space. Additionally, it is anti-fatigue; the softness of the cloth reduces weariness from prolonged standing. They are No-Slip mats, and because of their exceptional grip, they will not slide on slippery floors.

RUBBER FLOORING ACCESSORIES

Customers can choose whether they want tile or sheet, and they can customize their stair tread, wall base, transitions, and landing tiles. It is possible to synchronize a huge variety of colors and formats. When switching from one type of flooring to another or from one area to another, these are helpful. A room can be cohesively put together by facilitating all the design alternatives. The horizontal section at the top of each step is known as the tread. Good stair treads provide grip to reduce the risk of slips and falls. Base trim and wall base are related terms. It fills in any openings between the floor and the wall and offers a wall-protecting edge that is simple to clean.

VINYL FLOORING

Vinyl flooring is a synthetic material used in flooring that is affordable, durable, and easier to install than any other type of flooring. Portions of colored PVC are warmed up and later made into thin layers by pressing it adhered to make flexible sheets of vinyl that can be cut into planks or tiles. Vinyl planks and tiles are gaining much popularity owing to their quality like versatility, realistic appearances like wood plank and stone tile, and more importantly the ability to hold up in moist environments. Vinyl flooring can be colored and textured to favor various materials like wood, ceramic, and stone. Vinyl is often confused with other flooring types like laminate and linoleum flooring. If you are looking for affordable Vinyl Flooring Suppliers in Dubai, Z & S is here to make your floors look good!

GRANITE VINYL

Granite Vinyl is a 1.5mm thick, waterproof, oil-proof, and resistant vinyl product. The material is 12" x 12", improved to 1.5 mm in thickness, and significantly more robust and resilient for areas with high activity. The cost-effective alternative to actual ceramic tiles is this vinyl stick-down imitation tile. Old, unsightly floors can be quickly and temporarily fixed in the kitchen, bathroom, bedroom, dining room, living room, laundry room, basement, garage, office, RV, or any other home or business improvement project. The self-adhesive yellow marble granite floor tiles are incredibly simple to install—just stick and peel. They can be easily cut with a utility knife, and their strong adhesion allows you to lift them up for adjustments without risking damage to the target surface.

LINOLEUM VINYL

Linoleum is a composite flooring made of organic ingredients including cork dust, wood flour, linseed oil that has been hardened, pine rosin, and other things. It peaked in popularity in the early 1900s and was a popular choice for flooring in homes up until the 1940s. Linoleum floors come in a range of designs. This has fewer variables than vinyl flooring but is good for making huge patterns or blocks of solid color. Linoleum flooring, invented by Frederick Walton in the 1850s, is manufactured from organic materials like linseed oil, pine rosin, and cork dust and has a burlap or canvas backing.

PVC FLOORING

Are you looking for PVC flooring suppliers in Dubai but are quite confused by terminologies like Vinyl and PVC? PVC stands for polyvinyl chloride, sometimes known as vinyl! That's right, PVC flooring is the same as vinyl flooring. Polyvinyl chloride is simply a fancy term for it!

PVC is the world's third-most-produced plastic polymer. Aside from flooring, it's utilized in a variety of other applications, including pipes, cladding, insulation, and even medical supplies. PVC flooring has become a common synonym for vinyl flooring since so many people are familiar with it.

PVC flooring is scratch-resistant and waterproof, although hardwood can cost twice as much per square meter as vinyl. Aside from price and durability, modern technology has allowed producers to create PVC flooring products that look and feel just like real hardwood, stone, and ceramic tile. To the naked eye, it is difficult to distinguish between vinyl flooring and genuine natural materials such as wood, ceramic, or stone. For those in the UAE, PVC vinyl flooring Dubai offers a wide range of stylish and practical options for both residential and commercial spaces.

WET MAT FLOORING

SPVC / COIL MAT

CLEAR PVC

WET MAT FLOORING

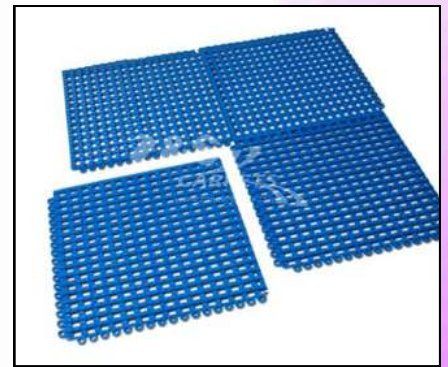

There are several uses for wet area floor mats. By increasing friction, they not only improve a pedestrian's footing but also wipe the pedestrian's feet, preventing wet and debris from being tracked throughout your institution and causing issues in other places. Keep in mind that floor mats must be level and in good condition. Even by itself, a torn or crumpled mat poses a fall risk. As a result, mats must be changed frequently. Z&S Carpets' wet mat helps prevent this.

ARTIFICIAL GRASS

Artificial grass is a material that resembles genuine grass and is constructed of synthetic, man-made fibres. Green synthetic grass blades with varying pile heights are also available in the market. Artificial grass is created in the same manner as carpet; it has a solid backing and the edges are machine stitched on. Most new artificial grass made today includes a brown thatch that simulates the appearance of dying grass on a natural grass lawn.

Artificial grass is known for its frequent sports-related purposes. In some parts of the country, artificial grass is more commonly used on high school football fields than natural grass. It is being used in a variety of sports applications, including batting fields, soccer facilities, and baseball fields. Nonetheless, it is currently used for both residential and commercial landscaping.

Artificial grass suppliers in UAE offer a range of options for those looking to incorporate this low-maintenance, water-saving alternative into their outdoor spaces. Artificial grass in UAE has become increasingly popular due to the region's arid climate and limited water resources.

GOLF GRASS

Golf courses employ artificial grass that is quite durable. Your artificial grass will remain the same whether it is extremely hot outdoors in the summer or extremely cold outside in the winter. Since the water can readily drain, there will not be any pools of water or puddles of mud when it rains. It is safe to assume that synthetic grass dependably offers a fantastic playing surface regardless of the climate. Manufacturers are now able to create grass that feels and looks realistic thanks to modern technologies. Artificial grass is designed to act similarly to natural grass in terms of look, functionality, and texture. Additionally, because the maintenance costs are minimal, you might ultimately save money.

FOOTBALL GRASS

When we are playing on the field, a pleasant setting is crucial. The largest issue is seen most clearly in the playground where we can see genuine grass. We need a solution that does not require maintenance and works well for outside play. Football artificial grass, which is now available, is created to seem like top-notch natural turf pitches. This kind of grass is created utilizing gentle, non-abrasive strands that mimic nature in appearance, texture, and functionality. Silica sand, which makes up 70% of the total weight of the infill, is environmentally benign, helps to stabilize and sustain the system. Because rounded granules resist floating or displacement in high-use areas and make up 30% of the overall infill weight, rubber granules are also advantageous for the environment, offer a softer surface, and create bounce.

EXHIBITION GRASS

Exhibitions and showcase places are increasingly using artificial grass. Installing it is not difficult at all, and once you are done with it, you can either roll it back up for future use or throw it away. Because artificial grass is so environmentally benign, it is perfect for fairs and exhibitions. Your visitors' subliminal perceptions of color can be very powerful. The ease and speed with which artificial grass may be set up for your events and exhibits is another major advantage. The final justification for using artificial grass for your exhibition or event is its affordability. It comes in rolls of 4 and 2 meters. Because all you have to do to install it is roll the artificial grass into place, it is simple to do.

GRASS ACCESSORIES

Artificial grass, a putting green, or pet turf. Whatever you choose to call it, you must adorn it. These items made of synthetic grass are quite real. They significantly simplify the process of installing and caring for artificial turf. A motorized plate compactor is more of a need than an accessory when it comes to installation. Compress the soil and aggregate before unrolling the turf. It takes a lot of time and energy to do it by hand. Those lawn edges cannot be simply left naked. Edges of exposed turf will not last for very long. Before you know it, the entire installation is destroyed. You must begin edging. And [Z&S Carpets](#) are the only option for synthetic grass edging. Power makes everything better! even maintaining the synthetic grass To swiftly clear your turf of debris, use a motorized broom. Depending on how you intend to maintain the artificial grass, you might require additional accessories. This assortment of artificial grass accessories included turf rakes for all installations, odor-neutralizing spray for pet lawns, and cup flags for putting greens.

ENIFIX

Artificial Grass Joiner

LAMINATE FLOORING

Laminate Flooring is a synthetic floor covering that is made to resemble wood or stone flooring. For decades, it has been a popular choice among DIY enthusiasts. Traditionally, it was a less expensive alternative to actual wood. Without the assistance of a professional floor fitter, any competent house renovator can install Laminate Flooring. Although the intention was for it to look and feel like hardwood flooring, it was extremely easy to tell the difference. Laminate Flooring in Dubai has become increasingly popular due to its cost-effective flooring option and versatility. For the best options, consider reputable flooring suppliers in Dubai. These types of flooring are a great choice for residential and commercial purposes.

Laminate Flooring is composed of four layers: 1) wear, 2. design, 3. core, and a back layer and each layer is fused together with extreme heat and pressure. Due to its multi-layer composition, it is an incredibly durable product. Laminate is scratch-resistant, and it is quite easy to maintain. Laminate's resilience allows for the absorption of high traffic, making it a perfect flooring choice for active families with kids and pets running around.

HDF (HIGH DENSITY FIBERBOARD FLOORING)

MDF (MEDIUM DENSITY FIBERBOARD FLOORING)

LAMINATE FLOORING ACCESSORIES

HDF FLOORING

(HIGH DENSITY FIBERBOARD)

High-density fiber board (HDF), sometimes referred to as hardboard, is a reasonably affordable composite wood building material. It is an engineered, composite wood board, and it may substitute wood in various interior design elements like molding, flooring, and cabinets. The best way to explain what a high-density fiberboard actually is is to describe how it is made, basically, fine wooden fibers are combined with a resin and then exposed to great pressure. A composite wood substance with a high density is produced when this compression and heat are combined.

MDF FLOORING

(MEDIUM DENSITY FIBERBOARD)

MDF, often known as medium density fiberboard for flooring, is an engineered product. It is constructed from fibers of leftover wood that have been heated and crushed with glue or resin. Although more dense, it is similar to particle board. MDF is denser than many hardwoods, weighing between 600 and 800 kg/m³. Additionally, it resists warping or swelling in moist environments like bathrooms or restrooms. Again, due to these qualities, it is an excellent core layer material for engineered and laminate floors. MDF is frequently used for doors, shelving, cabinets, wall panels, furniture, and decorative molding. Acoustic enclosures for loudspeakers and subwoofers are frequently manufactured from MDF due to the material's insulating properties in terms of sound and heat.

WALL CLADDING

It is the process of masking the interior or exterior walls of a building with various materials to enhance thermal insulation, durability, and appearance. In this method, one material is fitted over another one which creates an attractive and protective layer over the walls through architectural design. The materials included in wall cladding are stone, brick, metal, wood, or even composite panels to the surface of the wall. It not only provides an aesthetic appeal but also protects a building from climatic elements like extreme wind, snow, rain, humidity, sunlight, and other types of irritants that can bring a negative impact on the building. Moreover, wall cladding increases the efficiency of the energy by providing extra thermal insulation that helps regulate temperature and reduces heating and cooling costs. With the increasing demand for green building techniques, wall cladding has become vital in designing a sustainable building. You can contact us for wall cladding Dubai services for quality solutions.

WPC OD WALL CLADDING

WPC wall cladding is a type of architectural cladding made from a mixture of wood powder and plastic. It is often used as a low-maintenance and durable alternative to traditional wood cladding. WPC wall cladding can be installed on the ceilings, walls, and floors of residential and commercial buildings, giving them a natural timber look that stands out. WPC wall cladding is also weather-proof, UV-resistant, anti-fading, and anti-scratch. WPC wall cladding comes in various styles, colors, and sizes to suit different preferences and needs.

PU STONE

PU stone is a synthetic material that imitates the appearance and texture of natural stone. It is made of polyurethane, a type of polymer that can replace rubber, plastic, nylon, and other products. PU stone has many advantages over real stone, such as being lightweight, durable, economical, environment-friendly, and easy to install. PU stone can be used for interior and exterior wall decoration, landscaping, art, and other purposes. PU stone comes in various shapes and colors, such as Great Wall stone, tile board, flowing water stone, concrete cement board, mushroom stone, and stone skin. PU stone is a cross-border new material that applies familiar materials to restore the real stone decoration material.

PS WALL CLADDING

PS panels, also known as polystyrene panels, are typically made from expanded polystyrene foam (EPS). They are lightweight, rigid, and have good thermal insulation properties. These panels can simulate different effects, such as stone materials, gold, or wood grain, making your walls more beautiful and adding depth to the space. PS wall panels are not only easy to install, but also have good waterproof, fireproof, anti-corrosion, and sound insulation effects, and will not produce harmful substances such as formaldehyde, which is in line with the concept of modern home environmental protection. It is widely used in various occasions such as homes, bathrooms, and commercial places. PS wall panels are not only diverse in shape and rich in color, but also relatively low in cost. It is a very cost-effective wall decoration material.

WPC CO EXTRUSION WALL CLADDING

Co-Extrusion A cutting-edge premium shield surrounds the inner core of the wall cladding on ALL four sides. There are no toxic adhesives or chemicals used because the shield and core are extruded simultaneously in a mold at a very high temperature. In order to increase strength and durability, the core is made of carefully chosen recycled materials and highly dense recycled hardwood and softwood fibers. Best of all, it is 100% recyclable. It has a longer lifespan than typical uncapped composites, requires less upkeep, and guards against mold and mildew.

PVC ROUND HOLLOW WALL CLADDING

The interior wall claddings and ceilings are covered with hollow-core PVC round hollow wall cladding. They weigh less because of their hollow section. They contain tongue and groove joints that make installation quick and simple. Similar to wallpaper, PVC Round Hollow Wall Cladding is used as a decorative material for the interior of homes. You cannot put wallpaper or paint on a wall that is moist without first treating the area. PVC wall panels are the best accessible alternatives in such regions. PVC Round Hollow Wall Cladding is resistant to burning. PVC ignites at a temperature of about 435°C. Transportable and affordable, they also come with a lifetime warranty that lasts for roughly 20 years. and minimal installation waste because they come in a variety of sizes.

PVC WALL SHEET

Acrylic is an extremely useful material for applications that require transparency but do not require strong impact resistance. Because the material vaporizes upon collision with the focused laser light, it may be sliced into incredibly thin forms utilizing laser cutting technology. Acrylic thermoplastics are well-known for their weather resistance. They also have excellent impact strength, formability, and resilience to sunlight, temperature, and most chemicals. Standard grades of the sheet are slow-burning, but a self-extinguishing grade is available. Although acrylic plastic is half the weight of glass, it possesses several times the impact resistance. It is roughly 20% more effective than glass as a thermal insulator. It has no flavor or odor.
